WEATHER OF CONCERN

Weather of Concern

- An extended period of elevated to critical fire weather conditions is expected this week across Southwest California. A tightening northerly pressure gradient will generate increasing north winds Tuesday afternoon into Tuesday night with lowering humidities and bringing potential critical fire weather conditions.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

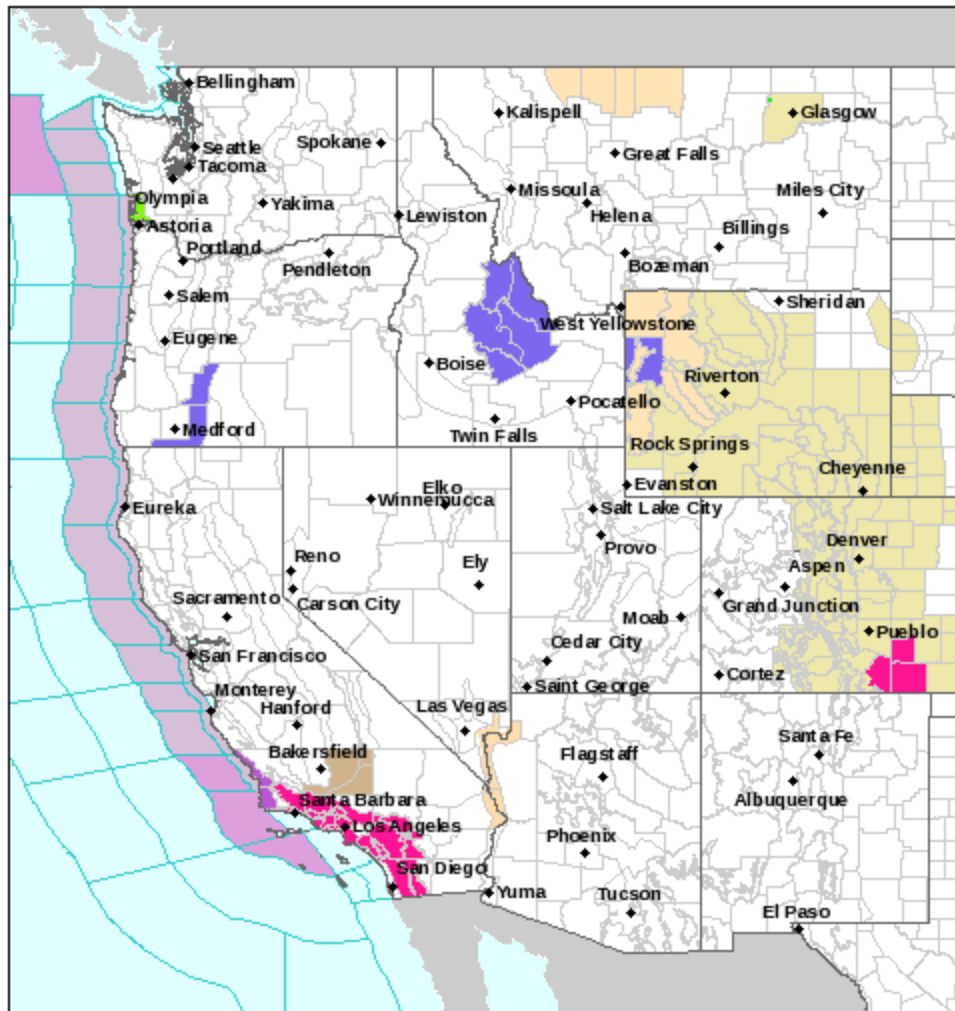

NORTHERN CALIFORNIA

Scattered showers will continue mainly in northern and eastern areas through early today. A few thunderstorms are possible as well. Snow levels will be 5000-6000 ft. A warming and drying trend will begin late today as high pressure builds over Northern California from the eastern Pacific. A NE/offshore surface wind pattern will enhance the warming and drying trend from the western Sierra slopes to the coast tonight through Friday morning, with peak gusts reaching 20-30 mph in wind-prone areas Wednesday and Thursday mornings. However, the drying effects from this wind event will not be sufficient to dry fuels out enough to elevate fire potential much, even in the lower elevations in the south. Temperatures will warm to about 5 degrees above normal west of the crest late in the week.

SOUTHERN CALIFORNIA

A weak ridge of high pressure will build into California from the Pacific Ocean causing temperatures to warm to near normal and minimum humidity to drop to 15% to 30% today. North winds of 20 to 30 mph with gusts to 50 mph will surface across the South Coast of Santa Barbara and the I-5 Corridor through tonight. Surface high pressure over the Great Basin will bring northeast to east winds of 20 to 30 mph with gusts to 50 mph to the mountains and below the canyons and passes of Southern California Wednesday morning through Thursday morning. Winds will start to decrease Thursday afternoon and become light by Friday as the surface high weakens. The ridge of high pressure aloft off the California Coast will become strong and move inland bringing well above normal temperatures to the coastal and valley areas Wednesday through Friday. Minimum humidity will be mainly in the single digits away from the immediate coast Wednesday through Friday. The ridge will move off to the east and onshore flow will occur bringing significant cooling and an increase in humidity to the region this weekend.
